Senior Engineer

Summary

Baker Consulting Group, Inc. (BCG) has been providing engineering and professional services to the petrochemical industry for over seventeen years. Our success is fueled by our commitment to exceed our client expectations while maintaining costs. Our professionals not only understand the technical aspects that go into a design, but also consider operational needs and future maintenance.

Position

Seeking team oriented senior engineer with expertise in mechanical engineering design with at least 5 years of liquid pipeline experience. Worked in both an office and field/site environment providing pipeline design/upgrades/retrofits; mechanical plant/field systems design. Ability to work alongside Client engineers and lead projects to support field modifications and expansion. Travel to client sites will be required.

The ideal candidate will exhibit the following capabilities:

- Ability to lead and grow the team.
- Ability to meet with customers and secure projects.
- Bid and proposal preparations.
- Knowledge of mechanical and civil engineering design practices especially relating to pipeline facilities design.
- Material selection, stress analysis and design documentation
- Erosion and sediment control design
- Quantity take offs and cost estimating
- Experience with pumps and piping materials
- Pipeline construction related experience
- Preparation of project technical specifications

Qualifications:

- Self-motivated with the ability to work, learn from, and teach others within the group
- Strong communication and time management skills
- Minimum of 5 years of liquid pipeline experience
- Minimum of Bachelor of Science in Mechanical Engineering or related field is preferred
- PE is highly desired
- Experience with, or knowledge of, AutoCAD 3D, Solidworks, or similar, is preferred
